United States Drivers Liscense Acceptor

ID Scanner system in place with face scanning and recognition for safe, secure, medical transactions

Customer performs ID validation

Backend Software Flow

A personalized prescription is written for the patient and is electronically submitted to the pharmacy via the Surescripts Cloud Prescription Delivery System.

1

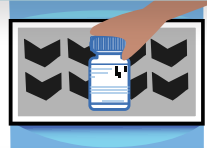

2

The pharmacist processes the Rx order and then sends it through the Cloud Delivery System to the on-site RapidRx Automated Dispensing Unit.

3

The RX is automatically selected, labeled, and approved by a Pharmacist who performs a drug utilization review (DUR).

4

The pharmacist approves and releases the Rx to the patient, and gives the patient a professional consultation if requested.

5

Monthly Reconciliation - We regularly reconcile all prescriptions and payments in a clean, easy to understand statement each month.

6

Tight Inventory Control - We keep a close eye on incoming and outgoing prescription inventory to ensure compliance and safety.

7

Maintenance & Operations - We provide efficient and swift maintenance services, updates, and repairs as necessary to keep your RapidRx Kiosk running smoothly.

8

Technical Support - We maintain a team of highly qualified technical support professionals to help resolve any issues or questions you may have about your unit immediately.
